

SUPRAFIX

Simple Installation, Enhanced Aesthetics

The patented SupraFix mounting system simplifies the installation of wall-mounted toilets, saving time and effort. Moreover, installation can be completed by just one person. Because the system is concealed, there are no visible fasteners, thus enhancing the toilet's overall aesthetics. Suprafix is available for La Belle, Memento and Subway wall-mounted models.

Precise Positioning

The use of a specially developed connector with the same length as the distance between the threaded rods of the wall carrier eliminates the need for further adjustment. The SupraFix 2.0 carrier supports the toilet while installation is completed.

Quick to Install

Once mounted on the SupraFix 2.0 carrier, the toilet is bolted in place through the seat attachment holes. When fully screwed into place, the toilet is locked into position against the wall. For convenience, the toilet seat is installed into the same assembly holes with special seat attachment hardware. It is then positioned on the bowl and screwed into place.

QUICK INSTALLATION

SPACE SAVING 1,000 LBS SUPPORTED

ADJUSTABLE HEIGHT **WATERSAVING**

TANK INSIDE THE WALL

Completely Invisible

The absence of visible fasteners on the sides of the toilet improves the aesthetics of the toilet. The smooth, uninterrupted surfaces on the sides of the toilet are easier to clean.

Effortless Cleaning

Because wall-mounted toilets are installed off the floor, the area underneath is easier to access and clean, making them a more hygienic option. In addition, all Villeroy & Boch models are space-saving by design and WaterSense-certified.
